

ROKIB AL DHIN RAADH

raadxbusiness9@gmail.com | rokib@blackbloxie.com | raadh.me | oxiedo.com

18-year-old independent AI researcher. Founder of Oxiedo, licensing the ORMAS training architecture to institutions whose data is closed to deep learning.

Publications & Technical Reports

R.A.D. Raadh. “ORMAS: Neural Architectural Transparency Enables Autonomous Self-Correction.” 2026. Zenodo preprint. DOI: [10.5281/zenodo.21730363](https://doi.org/10.5281/zenodo.21730363).

Submitted to **AAAI 2027**, Main Technical Track — under anonymous review. Not accepted and not published.

Recent Academic Service & Recognition

Dec 2026	Reviewer, Program Committee Trustworthy AI for Good (AI4GOOD) Workshop — NeurIPS 2026 , Paris - Peer review for the workshop’s trustworthy-AI track, covering mechanistic interpretability, attribution, post-deployment monitoring and model auditing. - The ICML 2026 edition of the workshop drew 539 submissions against a 34% acceptance rate, assessed by a committee of 237 reviewers.
Jul 2026	Cosmos Institute — Grants Review Application ranked highest in its cycle . Not funded: that round backed philosophical work on AI, and ORMAS is a technical architecture. Invited to reapply to a technical track.
Aug–Sep 2026	Entrepreneur First — The Bridge, San Francisco Cold application answered within 12 hours with a call booked with an EF investment-team lead; first screen held in London, August 2026. Now in the selection process for The Bridge , EF’s eight-week San Francisco residency — two interview rounds completed, decision pending as of September 2026.

Research Experience

2024–pres.	Independent Machine Learning Researcher ORMAS: Neural Architectural Transparency Enables Autonomous Self-Correction PyTorch · 10,594 lines · 61 files · Codebase: anonymous.4open.science/r/ormas-EB73 - Three-signal training architecture: unmodified global backpropagation, a per-node local loss through a shared 4,715-parameter bottleneck, and a health-gated correction engine with 8 diagnoses, each capped and logged. - First Input-to-State Stability characterisation for a self-correcting architecture; correction rate decays from 4.2 to 0.05 per epoch, as the bound predicts. - Recovery from mid-training structural collapse: 80.3% against a parameter-matched baseline stuck at 10.0% permanently, on every seed (+70.3 pp). - Retention through sequential task shift with no replay buffer and no task ID: 94.6% against 47.3% for ResNet-18; 58.8% zero-shot on unseen combinations against 25% chance. 383 controlled experiments, 4 architecture families, every run reproducible from seed, single RTX 3090. One adverse result published: 1.0 pp below baseline under adversarial weight injection.
------------	--

Engineering

2023–pres.	Sole Architect & Engineer OXIMO — Cognitive Multi-Agent Operating System Python · 40,933 lines production · 2,011 tests · Codebase: anonymous.4open.science/r/oximo-5C73 Multi-agent operating system: hierarchical task decomposition, on-demand role creation via a self-hiring pipeline, Graph-of-Thoughts planner, three-tier memory with temporal decay, and a seven-check input safety cascade.
------------	---

- Rebuilt from a **106,000-line monolith** to 40,933 lines — a **72% reduction** with all 12 critical algorithms ported and 2,011 tests passing.

Companies

2023–pres.	Founder Oxiedo — oxiedo.com Licensing ORMAS to institutions holding data they cannot currently train on. • One architecture under one licence, deployed on customer infrastructure. Five sectors in scope: AI training, regulated finance, medical AI, data-deletion obligation, and defence. • Pre-revenue, no customers, raising a pre-seed round. All results to date are CIFAR-10/100; no regulated data has touched the system.
2024–2026	Founder <i>Black Bloxie LTD</i> — <i>UK registered</i> A live company run as a controlled test environment for OXIMO. • Registered a UK company at 17 from Bangladesh, handling formation, AML compliance and cross-border operations independently. • Twelve-month ablation, deploy–remove–restore: removing the system cut commercial output 91% and new-customer acquisition 100%; restoring it recovered 1,300% against the ablated baseline. Zero advertising spend, zero human sales hours.
2020–2024	Independent ventures (5) <i>Automated sales · AI development · market tools</i> Five ventures between 12 and 17, each failing at a different layer. Their shared finding — that the binding constraint was coordination, not capability — is what OXIMO was built to answer.

Technical Skills

ML / AI	PyTorch, PCGrad gradient surgery, ISS convergence theory, noise-robust training, multi-agent orchestration
Engineering	Python (advanced), C++, LaTeX, Docker, FastAPI, SQLAlchemy, ChromaDB, Prometheus, React, TypeScript
Languages	English (fluent), Bengali (native)

Education

Fall 2027	Prospective Undergraduate Seeking admission to pursue research in AI safety, self-correcting neural architectures, and autonomous systems.
2025–2026	Self-Directed Coursework • Deep Learning Specialization (5 courses), DeepLearning.AI (Andrew Ng). <i>Completed.</i> • MITx AI Programs — 25 courses across AI foundations, precision medicine, sustainable energy, and transportation. <i>Certificates in progress.</i>
