Rokib Al Dhin Raadh

AI Researcher · Founder & CEO, OXIEDO · Inventor of ORMAS

raadh@oxiedo.com | raadh.me | ORCID 0009-0003-1178-5296 | oxiedo.com | Dhaka, Bangladesh

AI researcher and founder, age 18. Sole author of a peer-reviewed paper on the stability of self-repairing neural networks (DeepMath 2026). Reviewer for a NeurIPS 2026 workshop and invited speaker at Cohere Labs. Developed ORMAS independently over 383 experiments on a single GPU, without institutional affiliation or external funding.

Selected Distinctions

- **Sole author, peer-reviewed paper**, DeepMath 2026 (Conference on the Mathematical Theory of Deep Neural Networks), The Ohio State University. Double-blind review; 41 papers accepted.
- **Reviewer**, NeurIPS 2026 Workshop on Trustworthy AI for Good, Paris, France.
- **Invited talk**, Cohere Labs, Toronto, Canada, November 2026.
- **Highest-ranked application**, Cosmos Institute, 2026 review cycle.
- **Accepted, top 1% of applicants**, 1752vc Ignite, 2026 (OXIEDO).

Research

Interests. Stability of neural network training under non-gradient updates; self-repairing and auditable training; input-to-state stability and switched systems.

2024–present **Independent Researcher** ORMAS: self-repairing neural networks

- Developed ORMAS, a training architecture that monitors each layer during training, repairs failing components and logs every correction with its cause.
- In the DeepMath 2026 paper, established local practical input-to-state stability under bounded repairs and showed that per-channel-bounded repairs cannot reactivate a dead BatchNorm–ReLU channel.
- After two trained convolutional layers were zeroed, ORMAS recovered to 80.3% test accuracy on CIFAR-10, compared with 10.00% for standard training (three seeds). Under sequential learning it retained 94.6% on the first task, compared with 47.3% for ResNet-18.
- Conducted 383 controlled experiments across four architecture families (DAG, two CNNs, ResNet-18) on CIFAR-10 and CIFAR-100, all reproducible from seed, on one RTX 3090. Codebase of 16,316 lines of PyTorch.
- Released ormas-monitor on PyPI, which implements the dead-channel result as a runtime check. Applied to 22 torchvision models, it found near-zero channels in 19 of the 21 that use BatchNorm and ReLU; removing them from VGG-19-BN reduced compute by 18.6% and changed none of its top-1 predictions on 10,000 ImageNetV2 photos.

Invited Talks and Presentations

Nov 2026 **Invited talk**, Cohere Labs, Toronto, Canada.
When the Update Is Not a Gradient: Input-to-State Stability of Self-Repairing Neural Network Training.

Oct 2026 **Poster**, DeepMath 2026, The Ohio State University, Columbus, OH.
Self-Repair as a Bounded Disturbance: Input-to-State Stability of Neural Network Training Dynamics.

Professional Service

2026 **Reviewer**, NeurIPS 2026 Workshop on Trustworthy AI for Good, Palais des Congrès de Paris, France. Submissions on mechanistic interpretability, attribution, model auditing and post-deployment monitoring. Workshop · Reviewer list

Entrepreneurship

2023–present **Founder & CEO, OXIEDO** Auditable AI training for regulated industries

- Licenses ORMAS for on-premise use in regulated industries. Each training run produces a tamper-evident record of model changes, for institutions such as banks and hospitals that cannot yet train on their own data.
- Accepted to 1752vc Ignite (top 1% of applicants) and offered a place in the Freshmango accelerator. Finalist, The Bridge by Entrepreneur First, San Francisco. Invited to the Onstage W26 pre-pitch. Investment discussions ongoing with 500 Global and 1752vc.

2023–2026 **Sole Architect, OXIMO** Multi-agent operating system

- Designed and built a multi-agent system of 40,933 lines of Python with 2,069 tests, refactored from a 106,000-line codebase. Agents create new specialist roles as tasks require.

2025–2026 **Founder & CEO, Black Bloxie LTD** England & Wales, company no. 16711223

- Ran a twelve-month controlled study of OXIMO on a live e-commerce business. Output fell 91% when the system was removed and exceeded its original level after it was restored.

2020–2025 **Five earlier ventures**, ages 12 to 17: a tournament gaming app (co-founder), the EWM trading algorithm, a web-development sales agency, an e-commerce store, and a blockchain software project (discontinued). Sold the EWM algorithm to a U.S. client for about $10,000 at age 15.

Honors and Awards

2026 **Finalist**, International Academic Research Competition (IARCO 2026), for research proposal [4]. Ranked 24th of 145 in the Junior division, from about 500 participants in 60 countries. Results

2026 **Highest-ranked application**, Cosmos Institute, 2026 review cycle. Invited to the technical track.

2026 **Research community member**, Cohere Labs, Toronto, Canada. Invited on the basis of ORMAS, which the lab described as showing "remarkable initiative in ML safety and auditability."

2026 **Member**, FIAP, São Paulo, Brazil. Sponsored for MIT Open Learning's Universal AI program.

Software

2026 **ormas-monitor** (PyPI). Training monitor for PyTorch with per-layer alarms, dead-channel certification, optional repair and a tamper-evident log. Documentation

2026 **ORMAS reference implementation**. Reproduces all 383 experiments. Source · Run archive

Education

present **High school senior; prospective undergraduate.** Homeschooled, with senior-year high school coursework. Independent study in machine learning, control theory and the mathematics of learning dynamics.

2025–2026 **MIT Open Learning (MITx Online)**. Seven programs completed in foundation models, AI in medicine, energy, transportation and entrepreneurship.

2025–2026 **DeepLearning.AI**. Deep Learning Specialization (five courses).

Additional

Nov 2024 Guinness World Record attempt. 28 unedited livestreamed work sessions over two weeks.

Languages: English (fluent), Bengali (native).
